

FOREWORD

Dear Honda user,
You have bought a Honda brushcutter and we thank you for the confidence you have shown in us.

The aim of this manual is to help you become familiar with your new machine so that you can use it safely and keep it properly maintained.

To bring our customers the latest technological advances, new equipment and materials and the full benefit of our experience, we regularly improve the models in our product line. As a result, the information and characteristics given in this manual are subject to modification without notice and without any obligation to update the manual.

The illustrations in this manual show the most suitable model to represent the topic dealt with.

If you encounter any problem or have any question regarding your machine, please contact your dealer or an authorized Honda retail agent.

Keep this manual close at hand for ready reference and, if you sell your machine, please make sure you supply this manual with it.

We recommend that you read the terms of guarantee so that you fully understand your rights and responsibilities.

The guarantee is a separate document provided by your dealer.
No part of this publication is to be reproduced without prior written consent.

SAFETY INSTRUCTIONS

For your own safety and operating comfort, it is highly recommended that you read this manual in full.

Pay attention to these symbols and their meaning:

⚠ WARNING :

Indicates a high risk of severe personal injury or death if instructions are not followed.

CAUTION:

• Indicates a possibility of personnel injury or equipment damage if instructions are not followed.

NOTE: Source of useful information.

HOW TO IDENTIFY YOUR MACHINE

UEET		●	●	●
LEET	●		●	●

The model of your machine is indicated on its "identification label", by a series of letters and figures (see page 3).

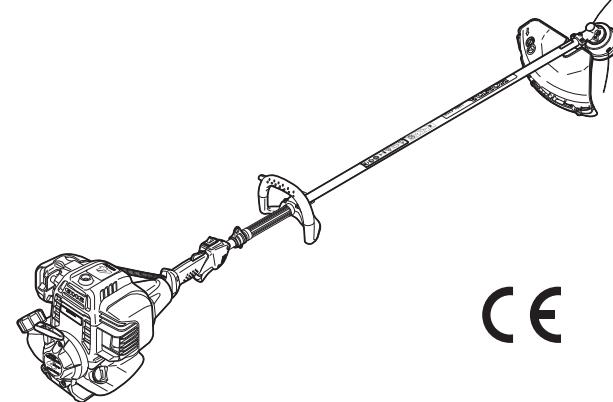

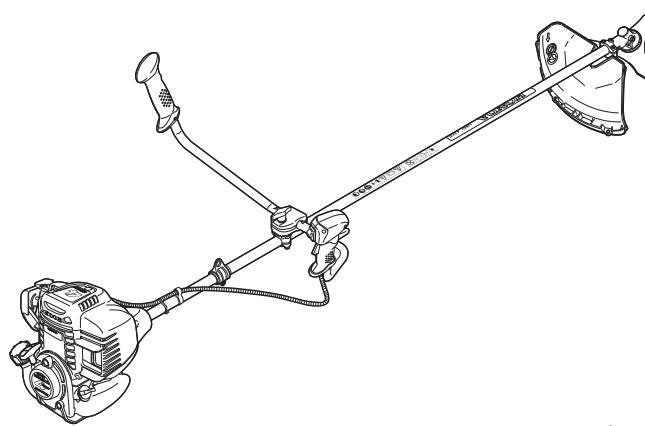

Write down your machine's serial number here

Write down your machine's model here

SAFETY INSTRUCTIONS

All the parts of your machine are potentially hazardous if it is used incorrectly or if it is not properly maintained. Special attention should be paid to sections preceded by the following words.

! WARNING :

Warns against a risk of serious bodily injury or fatal accident if instructions are not complied with.

CAUTION:

• Warns against a risk of bodily injury or equipment damage if instructions are not complied with.

NOTE: Indicates a source of useful information.

This symbol warns you to be especially careful when performing specific operations. See the safety instructions on the following pages with reference to the point or points indicated in the box.

TRAINING

A1. Carefully read the instructions in this manual. Before using your brushcutter, familiarize yourself with how to use it correctly and with its controls. Make sure you know how to stop the engine quickly.

A2. Use the brushcutter for its intended purpose, i.e.:

- Cutting grass with the nylon line attachment along flower beds, shrubberies, walls, fences or lawns and to finish borders after mowing with a lawnmower.
- For cutting tall weeds and brush the 3-tooth blade.
- Using it for any other purpose could be dangerous or result in damage to the machine.

A3. Do not allow children or anyone unfamiliar with the instructions to use the brushcutter. Local legislation may stipulate operator age restrictions.

A4. Do not use the brushcutter in the following circumstances:

- When there are people, especially children, or pets nearby. Comply with the safety perimeter of at least 15 metres between the machine and anyone who may be in the vicinity. The brushcutter is to be operated by one person only.
- If you have taken any medicine or substance which may affect your reactions and judgement.
- If a nylon line cutting head is used, make sure that the guard extension and the line cutter blade are correctly in place in order to ensure correct line length.
- If safety devices such as the cutting attachment guard are missing or if the guard is damaged.

A5. Do not make alterations to your brushcutter. By doing so, you could compromise your safety and expose yourself to serious accident or injury.

A6. Remember that the owner or operator is responsible for any accidents or risks to third parties and their property.

PREPARATION

B1. Do not use this equipment when barefoot or wearing sandals or when wearing loose-fitting clothing that may become snagged on plants. Long trousers, boots or protective footwear with anti-skid soles, goggles or a protective visor, gloves (preferably leather) and ear defenders must be worn when operating the machine. A hard hat should be worn in areas where falling objects may be encountered (such as branches or stones).

B2. Make a thorough inspection of the area to be cleared and remove any objects which could be thrown up by the machine (stones, pieces of wood, wire, bones, etc.).

B3. WARNING: DANGER!

Petrol is extremely flammable.

Store fuel in specially designed containers.

- Refuel the machine outdoors only, with the engine switched off. Do not smoke during refuelling or while handling fuel.
- Never remove the fuel filler cap or fill up the fuel tank when the engine is running or while it is still hot.
- Do not start the engine in the presence of spilled fuel. Move the brushcutter away from the area and avoid creating any source of ignition until the fuel has evaporated and vapours have dispersed.
- Make sure that the caps are securely fitted on the fuel tank and on the fuel can.

B4. Replace faulty exhaust mufflers.

B5. Each time the machine is used, before starting, perform a general inspection and check, in particular, all attachments, cutting assemblies, deflectors and mounting bolts to make sure that they are not worn, damaged or loose. Always check that the gas throttle trigger and the Stop button operate correctly.

B6. Check that the handles and harness attachment point are correctly positioned and that the machine is properly balanced.

The correct positions and adjustments are specified in the section on "Preliminary preparation and checks" in this manual.

B7. Adjust the idle speed so that the cutting attachment stops turning when the throttle control is released.

B8. Install the blade cover on the blade type cutter during removal and installation operations.

- Turn the engine switch to the Stop position and remove the spark plug cap.
- Wear gloves during this operation.

OPERATION

C1. Do not run the engine in a confined space where toxic carbon monoxide fumes may accumulate.

C2. Work by daylight only.

C3. As far as possible, avoid using the machine on wet ground.

C4. When operating the machine, ensure compliance with the safety clearance of the nylon line cutting head with respect to the harness attachment point.

C5. Walk when you use the machine, never run, and stay in a stable position. Beware of obstacles such as stones and tree stumps which could trip you.

C6. Tread carefully on slopes. When working on slopes, always proceed crosswise: never straight up and down.

C7. Do not use the machine on slopes that are too steep. It is the operator's responsibility to assess the potential hazards of the terrain and to take every necessary precaution for his or her own safety. This is especially important when working on slopes or rough, slippery or loose ground.

C8. Never modify the engine settings in such a way that it runs at excessive speeds.

C9. Before starting the engine, make sure there is no-one within 15 metres of the machine, that the cutting attachment is not touching the ground and that the machine is in a stable position.

C10. Take care when starting the engine. Comply with the safety instructions and stay clear of the cutting attachment.

C11. The engine must be stopped and the spark plug cap removed in the following cases:

- Before performing any servicing action on the cutting system.
- Before cleaning, checking, adjusting or repairing the brushcutter.
- The only adjustments to be carried out with the engine running are carburettor and idle speed adjustments.
- During this operation, make sure the cutting attachment does not strike any object and that the machine is in a stable position.
- If the cutting attachment strikes an object, inspect the cutting system and the transmission shaft to make sure they have not been damaged. Make any necessary repairs before resuming work with the machine.
- If the brushcutter starts vibrating abnormally, look for the cause of the vibrations immediately and take the necessary corrective action.

C12. Stop the engine in the following cases:

- Whenever the brushcutter is left unattended.
- Before refilling the fuel tank.
- When moving the machine from one area to another.

C13. Risk of "kickout" (blade thrust) with all rigid cutting blades.

C14. Using any attachments other than those recommended by Honda may cause damage to your brushcutter, and such damage will not be covered by your guarantee.

MAINTENANCE AND STORAGE

D1. Keep all nuts and bolts securely tightened to ensure safe operation. Regular maintenance is required to ensure safety and optimal performance.

D2. Do not use the machine with damaged or worn parts. Parts must be replaced, not repaired. Use genuine Honda parts. The cutting attachments must always be marked with the manufacturer's brand, the reference and the maximum operating speed. Parts of inferior quality may damage the machine and compromise operator safety.

D3. Wear heavy gloves when removing and installing the cutting device.

D4. Never store the brushcutter with fuel in the fuel tank in a room where fuel vapour could be ignited by a flame, a spark or a source of intense heat.

D5. Store in a clean dry room, out of the reach of children.

D6. Let the engine cool down before putting away the machine in any room.

D7. To reduce fire hazards, remove leaves, grass cuttings and excess oil from the brushcutter, particularly from the cooling fins, the exhaust system and the fuel storage area.

D8. When the machine is stored or carried, the cutting blade must always be covered by its transport guard to avoid any accidental injury.

D9. If the fuel tank has to be drained, this operation must be performed outdoors when the engine is cold.

D10. To protect the environment, do not dispose of old engine oil or fuel by pouring it down the drain, in the gutter or on the ground.

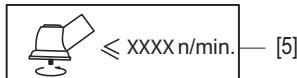

Your local service station can have oil and fuel safely recycled.

SAFETY STICKERS

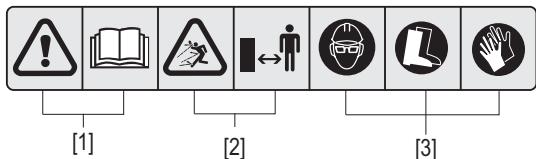

Your brushcutter must be used with care.

For this reason, adhesive labels in the form of pictograms have been placed on the machine to remind you of the main operating precautions. Their meanings are specified below. These labels are considered to be an integral part of the machine. If any of them comes off or becomes difficult to read, please contact your dealer to replace it. We also recommend that you should carefully read all the safety instructions (see page 2).

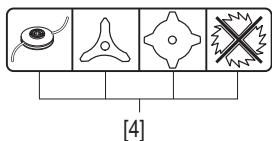

[A] Rotating speed

[B] General instructions

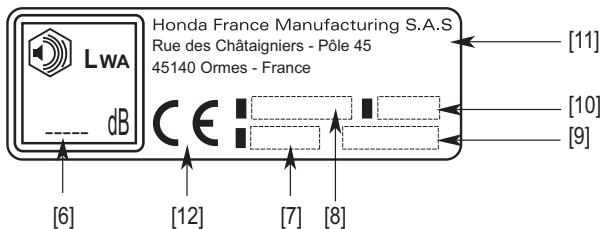

[C] Authorized cutting attachments

- [1] **WARNING:** Read the owner's manual before using the machine.
- [2] **WARNING:** Projection hazard. Ensure that all people and animals stay at a minimum distance of 15 m when you operate the machine.
- [3] Always wear goggles, a hard hat and any other necessary protective accessories to protect your eyes and body from objects (such as gravel, glass or pieces of metal) thrown up by the cutting attachment.
- [4] The brushcutter is to be used with a nylon or a metal disc line cutting attachment only. Do not use a circular saw blade with the standard protector.
- [5] Cutting attachment rotation speed.

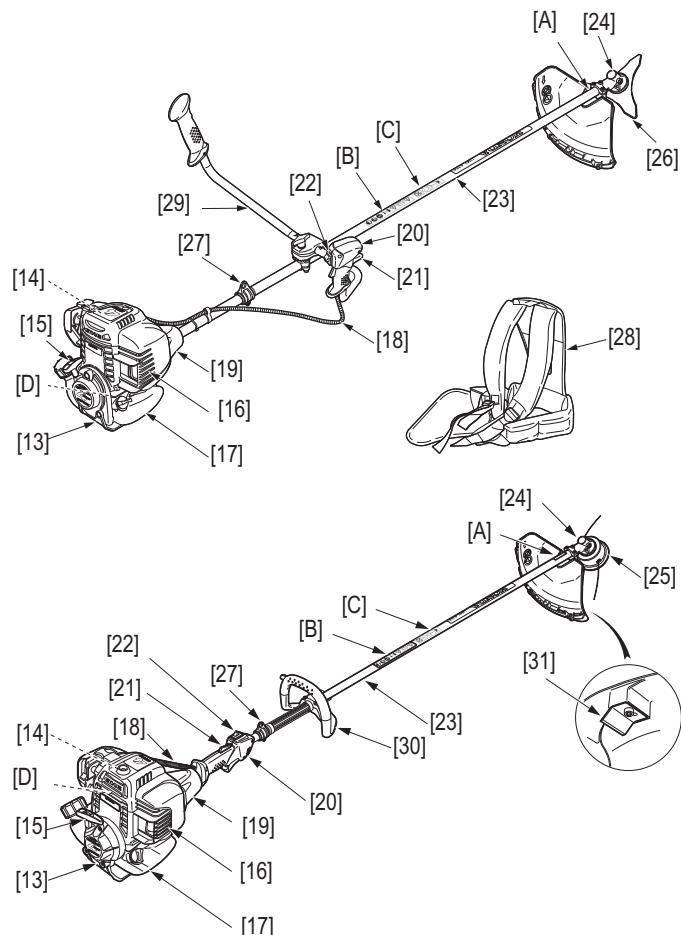

IDENTIFICATION OF MACHINE

[D] Identification plate

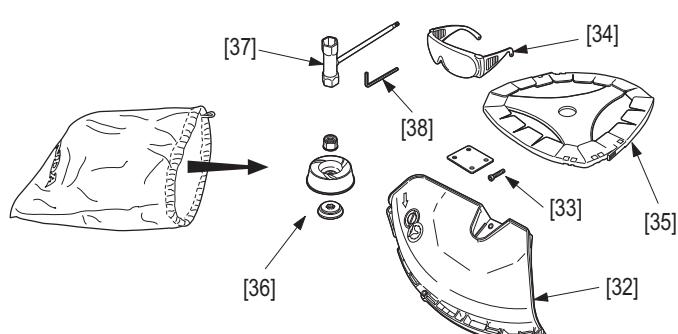

- [6] Guaranteed sound power level Directive 2000/14/EC
- [7] Model - Type
- [8] Model - Name
- [9] Year of manufacture
- [10] Serial number
- [11] Name and address of manufacturer
- [12] Conformity mark, according to the 98/37/CE, 2004/108/EC, 2000/14/EC, 2005/88/EC modified directive

GENERAL DESCRIPTION

IDENTIFICATION OF COMPONENTS

- | | | | |
|------|--------------------------|------|--------------------------|
| [13] | Engine | [23] | Transmission shaf |
| [14] | Spark plug | [24] | Transmission head |
| [15] | Recoil starter | [25] | Nylon line cutting head |
| [16] | Air filter | [26] | 3-tooth blade |

| [22] | Start / Stop switch | | |

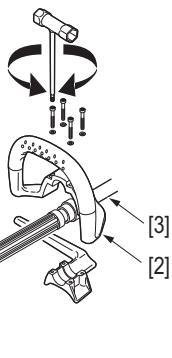

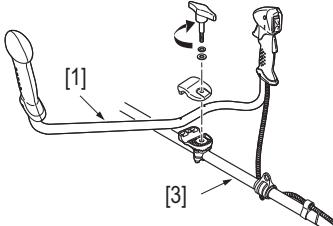

CONTENTS OF BAG

- [32] Attachment protector
- [33] Screw and spacer
- [34] Goggles
- [35] 3-tooth blade and its protection
- [36] Stabilizer, spacer and nut
- [37] Multipurpose wrench
- [38] Hexagonal wrench

FITTING

GRIPS AND HANDLES

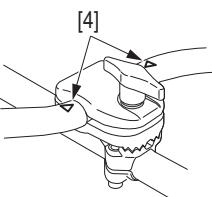

The bike type handle [1] (U type) or the loop handle [2] (L types) must be installed on the transmission tube [3].

CAUTION:

- U types: Position the handle between the two arrows [4].

Fitting is to be performed using the tools in the kit supplied with the appliance.

[5] Spark plug wrench / Torx wrench

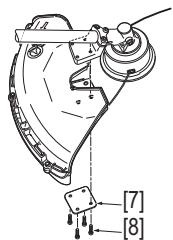

[6] Hexagonal wrench

ATTACHMENT PROTECTORS

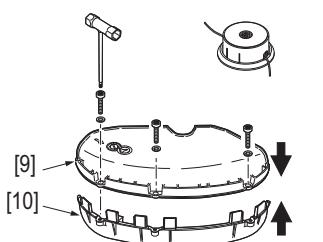

Your brush cutter is supplied with a guard.

Install the guard on the machine with the four screws [8] and the spacer [7] supplied with the Torx wrench.

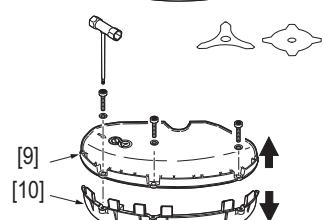

UTILIZATION WITH NYLON LINE CUTTING HEAD

Fit the two sections [10] and [9] and clamp them into place as shown in the diagram. Screw the 3 screws and the washers by using the torx wrench.

UTILIZATION WITH BLADE

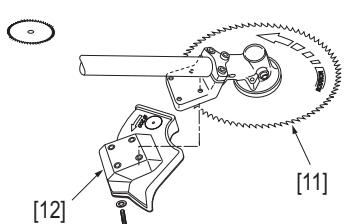

Do not fit the lower section [10].

⚠ WARNING : (UMK435E1 UEET)

While using the Honda circular saw blade [11] (optional), always replace the standard protector [10] and [9] by the special Honda protector [12], available as an accessory.

Assembly is the same as for the standard protector.

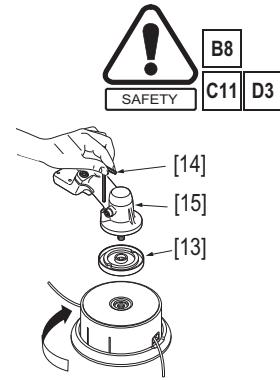

ASSEMBLING THE CUTTING SYSTEM

CAUTION:

- Pay special attention when fitting the spacer [13]. The concave side must face the transmission [15].

NYLON LINE CUTTING HEAD

With the spacer [13] already fitted on the transmission shaft, screw on the nylon line cuttinghead. It is tightened by turning counterclockwise.

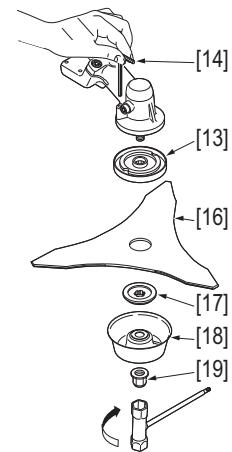

Use the hexagonal wrench [14] to immobilize the transmission so that the nylon line cutting head is properly tightened.

3 - TOOTH BLADE

Place the grass-cutting disc [16] between the spacers [13] and [17] so that the grooves on the spacers fit perfectly onto the shaft.

Install the stabilizer [18]. Block the rotation of the shaft with the hexagonal wrench [14]. Securely tighten the locknut [19] in the counterclockwise direction with the appropriate wrench.

CIRCULAR SAW BLADE (OPTIONAL ACCESSORY)

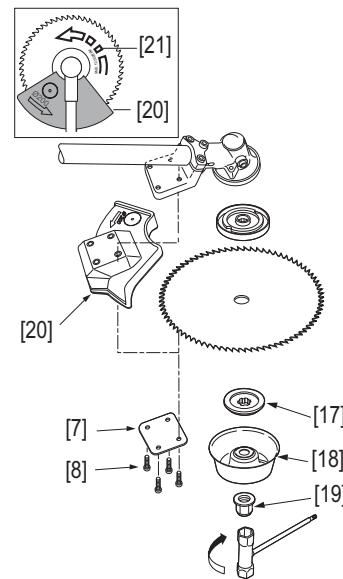

Assemble in the same way as the 3- tooth blades.

⚠ WARNING :

Use of this accessory is restricted to the UMK435E1 UEET models only, and it must be fitted together with the special Honda protector [20].

⚠ WARNING :

Install the blade in the appropriate way. The arrow on the blade [21] must point in the same direction as the one on the protector [20].

FITTING AND ADJUSTING THE HARNESS

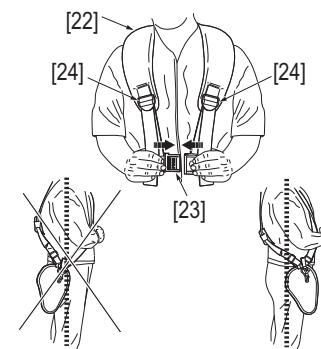

⚠ WARNING :

For operator safety and comfort, it is important to adjust the harness straps so they can be worn comfortably and so that the machine is properly balanced in the working position.

Machines are supplied with a double harness [22].

Put on the harness and fasten it with the quick fastener [23].

Adjust the straps with the buckles [24] so that the machine hangs at hip height.

PRELIMINARY PREPARATION AND CHECKS

BALANCING THE MACHINE

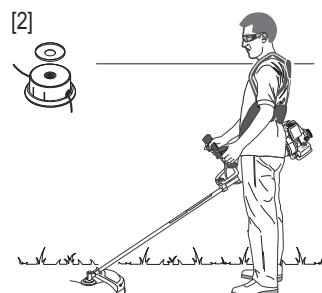

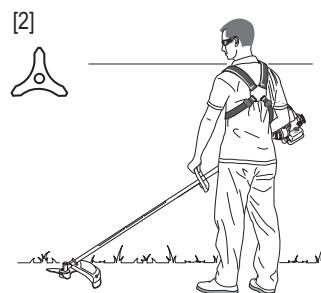

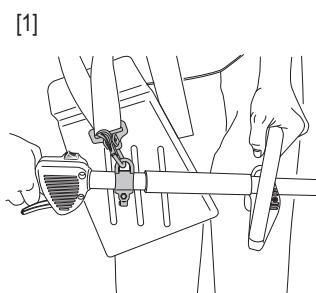

Attach the brush cutter as illustrated [1].

Once the machine is in place, it is essential to check that it is correctly balanced. This check must be performed with the cutting attachment fitted on the appliance and with the fuel tank half-full.

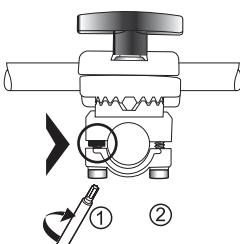

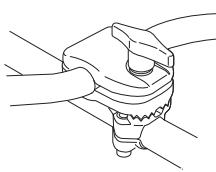

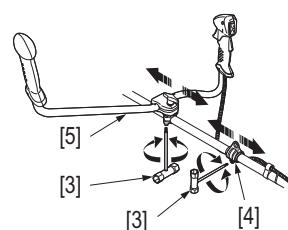

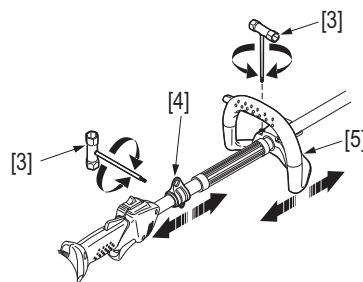

Adjust the length of the harness so that the cutting attachment is parallel to, and in contact with, the ground.

When the machine is equipped with a grass-cutting disc, the disc must be fitted with the stabilizer (see page 4).

Correct balancing is obtained when the stabilizer just gently touches the ground [2].

It must be possible to raise the cutting attachment off the ground with only a slight effort on the handles. If adjustment is required, move the attachment point [4] forwards if the cutting attachment feels too heavy or rearwards if it feels too light. Loosen the bolts with the Torx wrench [3] supplied to move the harness attachment point to the desired position.

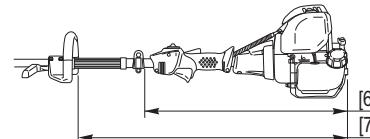

CAUTION: (Type UEET)

- Be careful not to pull the throttle cable too tight when moving the handle [5]. Check that the throttle trigger operates smoothly.

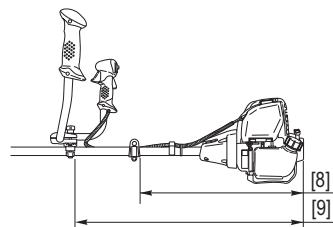

Adjust the position of the loop handle or the bike handle [5] by loosening the four bolts to obtain a comfortable operating position. When you have found the ideal position, check the balance again and adjust if necessary.

Then securely tighten the bolts to lock the handle in position.

For reference, the standard adjustments are as follows for the specified types of brushcutter:

	UMK425E1	UMK435E1
LEET		
[6]	530 mm	545 mm
[7]	760 mm	775 mm

	UMK425E1	UMK435E1
UEET		
[8]	490 mm	500 mm
[9]	740 mm	750 mm

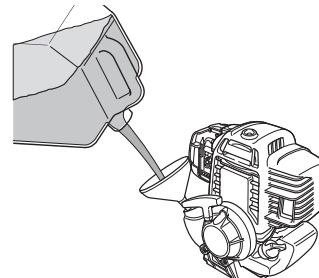

FILLING THE FUEL TANK

Safety B3 C12

WARNING :

The pressure inside fuel tanks may increase when the ambient temperature rises. The cap should be removed with care to avoid any splashing of fuel. Fuel should be stored in a cool place, for short periods of time, and must never be left in direct sunlight.

	UMK425E1	UMK435E1
Tank capacity	0.58 ℥ (580 cc)	0.63 ℥ (630 cc)
Recommended fuel	Premium unleaded	

CAUTION:

- Clean the fuel tank cap and its edges to prevent foreign bodies from entering the tank.
- Fill the fuel tank with a suitable funnel or a jerrycan with a suitable spout.
- For easy filling, place the machine in the operating position.
- Make sure that the machine remains in a stable position throughout this operation so that it does not fall over.

WARNING :

Petrol is extremely flammable and, in some circumstances, it is explosive.

Fill the fuel tank in a well ventilated area with the engine switched off. Do not smoke and avoid any flames or sparks in the area where filling is performed and where the fuel is stored. Do not overfill the fuel tank. (The fuel level must be below the filler neck).

After filling the tank, make sure that the tank cap is correctly fitted. Take care not to spill fuel during the tank filling operation. Petrol splashes or vapours could catch fire. Make sure that any spilled petrol has evaporated and that vapours have dispersed before starting the engine. Avoid direct contact of petrol with the skin and do not breathe the vapours.

KEEP FUEL OUT OF REACH OF CHILDREN.

STARTING AND STOPPING THE ENGINE

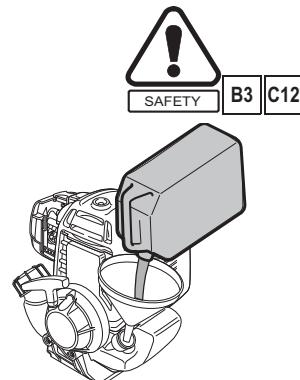

FILLING THE OIL TANK

WARNING :

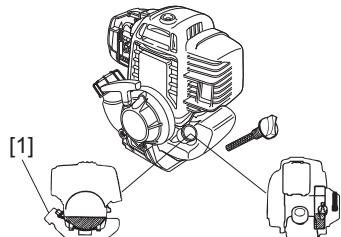

The engine may be seriously damaged if it is run with insufficient oil.

Check the oil level on a flat horizontal surface with the engine switched off. The engine's service life may be shortened if non-detergent oil or 2-stroke engine oil is used.

CHECKING THE OIL LEVEL

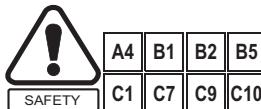

1. Place the engine in a horizontal position on a flat surface.
2. Remove the oil filler cap and check the oil level: oil must be level with the top of the oil tank neck [1].
3. If the level is too low, top up with the recommended oil to the top of the oil filler neck. Use Honda 4-stroke oil or an equivalent engine oil with high detergent properties, of prime quality and certified as complying with American automobile manufacturer standards for SG and SF classification.

WARNING :

The machine must always be resting on the ground when starting up.

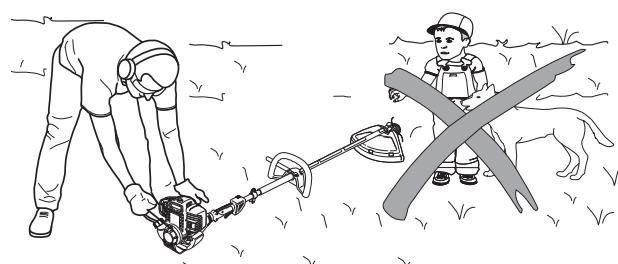

Make sure that it is stable and that the cutting attachment is not touching other objects or the ground.

BEFORE STARTING UP

Check that the guards are properly fitted and tightened and that you have the necessary protective equipment such as goggles, gloves, boots and ear-defenders.

Check that the cutting attachment and the grips or handle are correctly tightened. Move the machine away from the location where the fuel tank was filled. Stand on flat, stable ground. Check that the spark plug cap is in place.

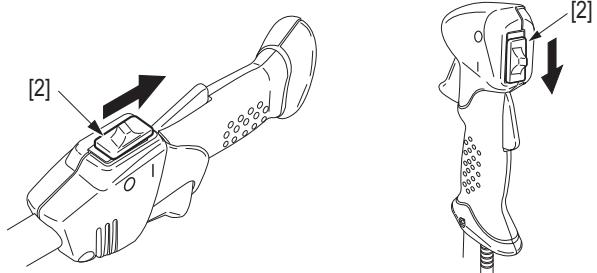

COLD START

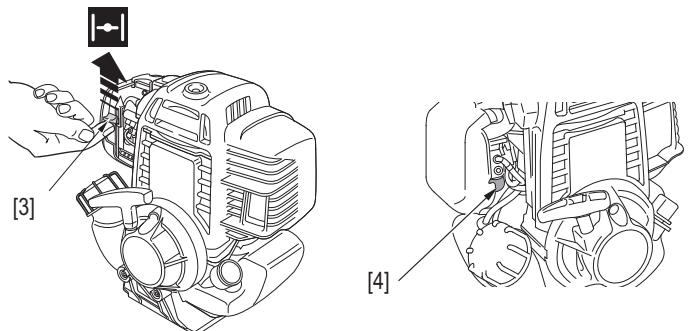

The machine is considered to be "cold" if the engine has not been running for more than 5 minutes in the 10 minutes before starting up.

NOTE: If the ambient temperature is warm enough (summer), the engine may start without applying the choke.

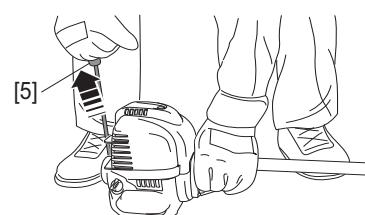

START THE ENGINE AS FOLLOWS:

1. Place the Start/Stop button [2] in the Start position "I".
2. Place the choke lever [3] in the high position (closed).
3. Press the primer pump button [4] located below the carburettor several times to prime the engine.

4. Gently pull the recoil starter [5] until you feel resistance.
5. Then pull vigorously until the engine starts.
6. When the engine has started, return the choke lever [3] to the low position.

CAUTION:

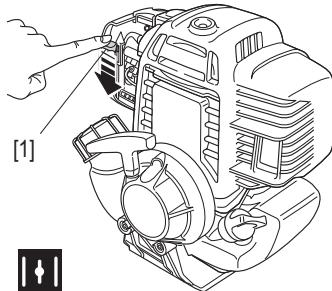

- Do not pull the recoil starter cord all the way out.
- Do not release the recoil starter suddenly so that it strikes the engine. Return it gently to avoid damaging the starter mechanism.

NOTE: Always pull the recoil starter vigorously. If you pull too gently, sparks may not be produced on the spark plug and the engine will not start. Do not place your foot or knee on the transmission tube to hold the machine, as this could bend the tube, rendering the machine inoperable.

HOT START

The machine is considered to be "hot" if the engine has been running for more than 5 minutes in the 10 minutes before starting up.

The hot start procedure is the same as the cold start procedure except that the choke [1] is not needed. (The lever must be left in the low position).

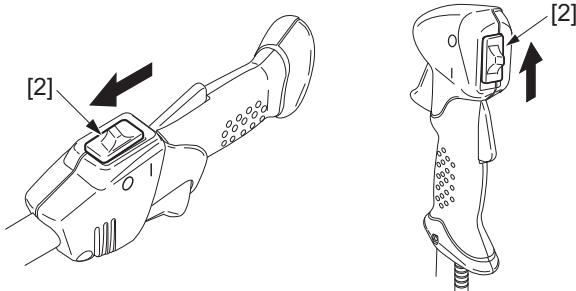

NOTE: Should you have difficulty start a hot engine, follow this procedure:

1. Turn the engine to the OFF position (O).
2. Make sure that the choke lever is in OPEN position.
3. Keep the throttle control lever (throttle trigger) fully squeezed.
4. Pull the starter grip 3 to 5 times, and release the throttle control lever (throttle trigger).
5. Start the engine referring to the procedures described above.

CAUTION:

- Be sure to turn the engine switch to the OFF position (O).
- If this operation is executed with the engine switch at the ON position, the blade may rotate when the engine starts and a personal injury may result.

STOPPING THE ENGINE

1. To stop the engine, press the Start/Stop button to engage the Stop position (O) [2].
2. This step can also be taken to stop the machine in case of emergency.

! WARNING :

Note that the cutting attachment continues turning by inertia after the engine has been stopped.

OPERATION

OPERATING POSITION

Once the machine has been started, attach it to the harness as already described in the section on preparation.

! WARNING :

When handling the machine, take care to avoid striking any objects with the cutting attachment and keep the cutting attachment away from your body. Do not use the machine unless it is attached to the harness.

Hold the brush cutter firmly by both grips as shown. Always keep firm footing on both feet when working. Take appropriate breaks and vary your working position.

CAUTION:

- When using the machine, always allow the engine to idle between operations. If the machine is allowed to run at maximum speed with no load (no resistance on the cutting attachment) for long periods, the engine may be seriously damaged.

WITH NYLON LINE TYPE CUTTING HEAD

This attachment is designed to complete the job done with a lawnmower. It is especially handy and efficient for cutting grass along walls or fences, around trees or posts and on narrow or uneven surfaces where a lawnmower cannot be used.

! WARNING :

Make sure the line cutting blade is properly mounted on the cutting attachment guard.

LINE LENGTH ADJUSTMENT

At maximum rotating speed, gently press the nylon line cutting head on the ground. The line is automatically extended. Repeat this operation until the optimal length is obtained.

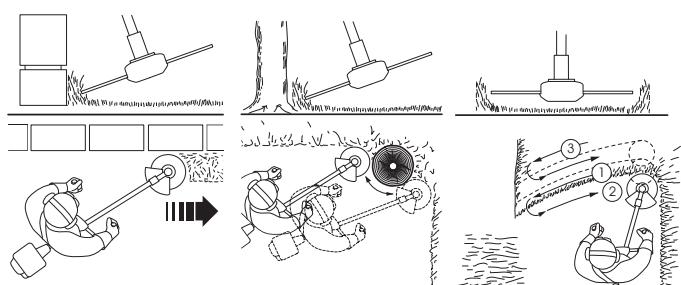

When the engine is started and the cutting attachment starts rotating, the excess line will automatically be cut by the line cutter located on the guard.

CUTTING

The nylon line cuts grass cleanly without damaging tree bark and avoiding the violent impacts that would occur between a rigid cutting attachment and hard surfaces.

It is, however, recommended not to work too long in such areas in order to avoid damaging fragile, immature plant, in particular, and to avoid premature line wear.

Proceed in stages, when trimming, tilting the cutting attachment slightly.

For larger areas, hold the cutting attachment horizontal and sway it sideways from right to left and from left to right, alternately.

MAINTENANCE

WITH 3-TOOTH AND 4-TOOTH BLADE

CAUTION:

- Do not use a blade larger than 255 mm in diameter.

CUTTING

The 3-tooth and 4-tooth grass-cutting blade is especially suitable for clearing dense and tangled weeds, bushes such as brambles or wild shrubs with a stem diameter of less than 2 cm.

To trim bushes, lower the cutting attachment from above while holding it horizontal so as to cut the branches in small pieces.

WARNING :

It is dangerous to use grass-cutting blades on very hard wood and/or plants with a large stem diameter. Kicking of the cutting attachment is difficult to control, and can seriously endanger the operator and cause serious damage to the equipment.

WITH CIRCULAR SAW BLADE

WARNING :

Use of the circular saw blade is only authorized on UMK435E1 of type UEET.

CAUTION:

- Never use a saw blade with a diameter in excess of 200 mm. The circular saw blade is intended to be used for cutting out shrubs, bushes and small trees whose trunk does not exceed 6 cm in diameter.

CUTTING

WARNING :

Some blade sectors [1] must not be used as they will cause the tool to rebound owing to the direction of rotation.

Tools fitted on Honda brushcutters rotate counterclockwise. It NEVER cut with the right half of the blade. The part to be used is represented by the grey area.

For the best results, you must swing your equipment quickly towards the branch or trunk to be cut. Do not proceed gradually as engine speed could drop and lead to stalling.

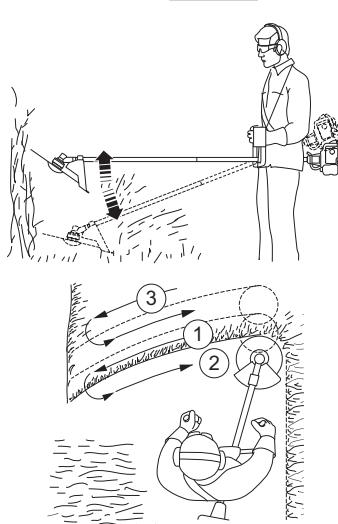

WARNING :

Estimate the height of the items to be cut and where they might fall.

Ensure that falling pieces will not cause bodily injuries to persons or property damage.

Make sure the blade is not stuck in the trunk when it falls.

Always cut on the side opposite the fall.

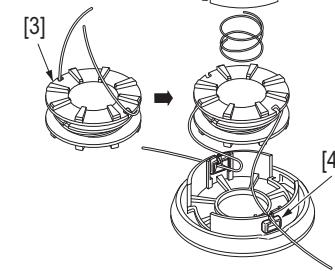

REPLACING THE LINE

1. Press the lugs [2] located on either side of the head to open it.

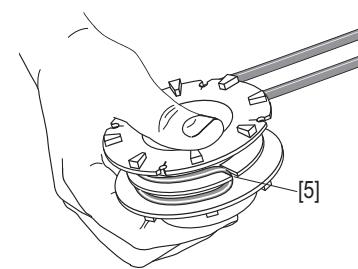

2. Extract the reel and remove the rest of the nylon line.
3. Prepare 3 metres of 2.7 mm diameter line and fold it in half, lengthwise.
4. Place the middle of the line in the notch [5] in the reel and coil the wire by turning in the specified direction.
5. Secure the ends in the two opposite notches [3] (leaving an excess of 10 cm of line).
6. Reinstall the reel in its place and feed the lines through the two side holes [4].
7. Reinstall the cover.

CAUTION:

- Always use a line of the diameter recommended in the technical specifications.
- Poor results would be obtained if the line diameter is too large as this will result in an excessive load on the engine, so reducing its performance.

WARNING :

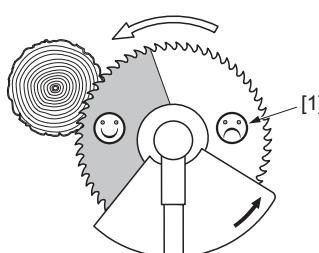

Never replace the nylon line with a line of a different material, such as steel wire.

To avoid severe personal injury, disconnect the spark plug cap to prevent accidental starting.

Wear heavy gloves to protect your hands when replacing the nylon head.

SHARPENING

3-TOOTH AND 4-TOOTH BLADES

Sharpening is essential to obtain good results. A slightly blunt cutting attachment can be sharpened with a file.

A grinding wheel should be used if the wear is more severe.

CAUTION:

- In all cases, the cutting attachment must be kept correctly balanced. If you do not have the required tools or if you think your cutting attachment may not be properly balanced, contact your authorized Honda dealer.

Remove the cutting attachment for sharpening and check that it is not cracked, out of true or bent.

If it is, replace it with a new one.

Both sides of 3-tooth and 4-tooth blades can be used.
When one side is worn, the cutting attachment should be turned over to use the cutting edges on the other side.
Only the bevelled edges of the teeth are to be sharpened.
It is important to keep their profile regular and to avoid incipient fractures.
All the teeth must be sharpened in the same way.

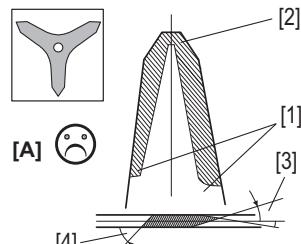

NOTE: If the machine vibrates abnormally after sharpening, this indicates that the blade is unbalanced. In this case, contact your authorized dealer Honda to have it checked.

CAUTION:

- Replace the blade when the wear limit shown in the illustrations below has been reached.

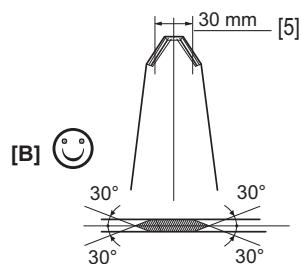

[A] Unsatisfactory

- [1] Incipient fracture
- [2] Limit exceeded and tooth profile irregular
- [3] Angles incorrect and unequal
- [4] Unsatisfactory cutting profile

[B] Satisfactory

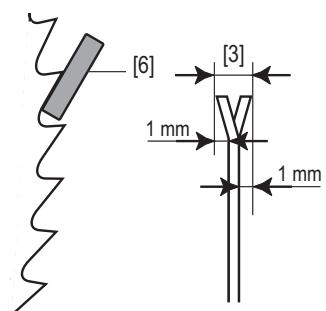

- [5] Sharpening limit

SHARPENING CIRCULAR SAW BLADE

A circular saw blade can be sharpened using a file [6] if it is only slightly worn. It is very important to keep the correct tooth profile, as well as cutting angles and tooth pitch [3].

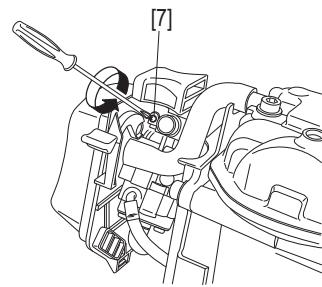

If a more extensive sharpening is required, contact your authorised Honda dealer who has access to suitable specialist sharpening equipment.

ADJUSTING THE CARBURETTOR

PROCEDURE

Start the engine and let it warm up to normal operating temperature. Then turn the idle screw [7] to the right or left to obtain the correct setting.

	UMK425E1	UMK435E1
Idle speed	3 100 ± 200 rpm.	

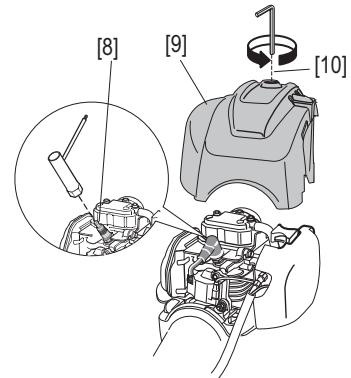

NOTE: When the engine is idling, the cutting attachment must not rotate.

CHECKING THE SPARK PLUG

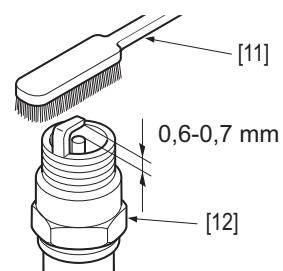

1. To reach the spark plug [8], the top cover must be removed from the engine [9]. Use the hexagonal wrench supplied to undo the bolt [10].

NOTE: Hot parts and moving parts (flywheel) are exposed when the engine top cover is removed. Never use your brush cutter with the engine cover removed.

2. Remove the cap and unscrew the spark plug using the wrench supplied.
3. Clean the electrodes with a wire brush [11] to remove carbon deposits.
4. If the electrodes show signs of wear, replace the spark plug with a new one with the same characteristics.
5. Check the spark plug gap with feeler gauges [12]. When adjustment is required, carefully bend the side electrode.
6. Reinstall the spark plug and screw it finger-tight onto its seat.
7. For new spark plugs, tighten by an additional 1/2 turn with the spark plug wrench. When the same spark plug is installed, 1/8 to 1/4 of a turn is enough.

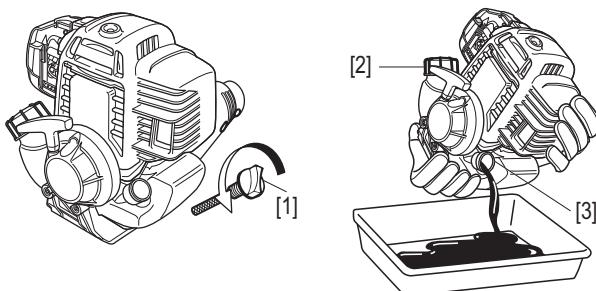

CAUTION:

- If a spark plug is insufficiently tightened, it is liable to heat up and damage the engine. If the spark plug is overtightened or cross-threaded, irreparable damage could be caused to the engine block.

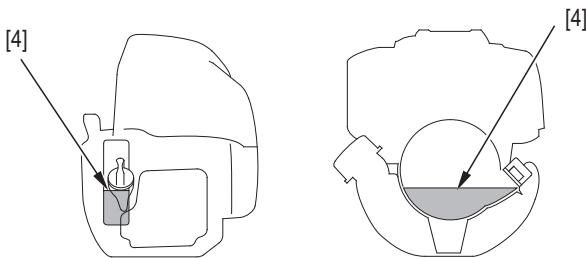

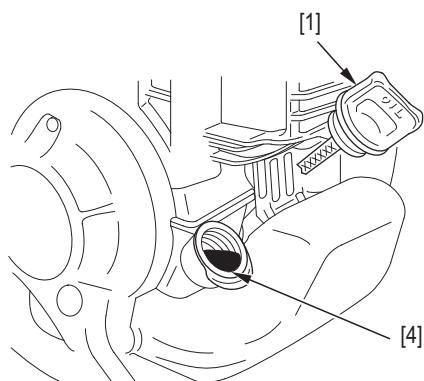

ENGINE OIL CHANGE

NOTE: Drain the oil while the engine is still warm to assure rapid and complete draining.

1. Check the fuel tank cap [2] is tightened.
2. Remove the oil filler cap [1] and drain the oil into the oil container by tipping the engine toward the oil [3] filler neck.
3. Refill with the recommended and check the oil level [4] (see page 6).

	UMK425E1	UMK435E1
Engine oil	SAE 10W30	
Oil tank capacity	0,08 l (80 cc)	0,10 l (100 cc)

4. Install the oil filler cap [1].

CAUTION:

- Wash your hands with soap and water after handling used oil.

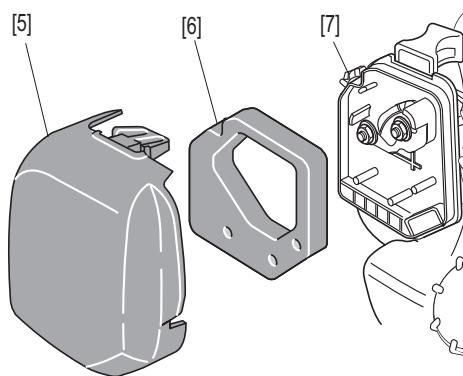

NOTE: Please dispose of used motor oil in a manner that is compatible with the environment. We suggest you take it in a sealed container to your local service station for reclamation. Do not throw it in the trash or pour it on the ground.

AIR CLEANER MAINTENANCE

The foam air filter element must be cleaned regularly to prevent impurities from entering the engine and causing premature wear. A dirty air filter will reduce engine power and increase fuel consumption.

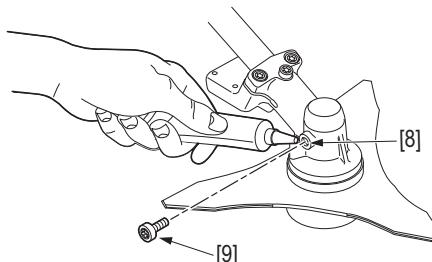

CAUTION:

- Never run the engine without the air filter, as this could cause premature wear of the engine.
1. Open the air filter cover [5] and remove the filter [6] from the filter housing [7].

2. Clean the filter with warm soapy water or in a nonflammable solvent and then leave to dry.
3. Dip the element in clean engine oil and squeeze out the excess oil.
4. Reinstall the foam filter element and the filter cover.

LUBRICATING THE TRANSMISSION HEAD

1. Remove the bolt [9] from the transmission head.
2. Insert the nozzle of the tube of special lithium grease (available from your Honda dealer) and fill with grease while turning the cutting attachment so that the grease is properly distributed. Continue until grease comes out of the bolt hole [8].
3. Reinstall the bolt and tighten moderately.

TROUBLESHOOTING

MAINTENANCE SCHEDULE

Perform this maintenance at every indicated month or operating hour interval, whichever comes first.		Frequency			
Item	Action	Each time used	Every 3 months or 25 hours	Every 6 months or 50 hours	Every year or 100 hours
Engine cooling fins	Clean				
Condition of cutting attachment and guard	Check				
Zone around transmission head	Clean				
Transmission head	Grease				
Operation of throttle trigger	Check				
Operation of Stop button	Check				
Idle / Clutch	Check				
Air filter element	Check				
	Clean		(1)		
Air filter housing	Clean		(1)		
Zone around spark plug	Clean				
Spark plug	Check				
	Clean				
Zone around carburettor	Clean				
Cables and connections	Check				
Fuel system	Check	Every 2 years (replace if necessary) (2)			
Fuel filter	Check				(2)
Spring and clutch pads	Check			(2)	
Idle speed	Check				(2)
	Adjust				(2)
Engine oil	Check				
	Replace	Replace after 10 service hours and then every 6 months or 50 service hours			
Fuel tank	Clean				
Valve clearance	Adjust				(2)
Nuts and bolts	Check / Tighten				

(1) Clean more often in dusty environments.

(2) These operations should be performed by an authorized Honda dealer, unless the owner has the appropriate tools and technical know-how required. Refer to the Honda workshop manual.

Problem	Probable cause	Page
Engine does not start.	1. No fuel. 2. Start/Stop button is in Stop position. 3. Spark plug cap incorrectly attached or disconnected. 4. Faulty spark plug or incorrect gap. 5. Engine flooded. Remove spark plug, dry it with a cloth and reinstall it. 6. Fuel filter is dirty. Clean it.	5 6 9 9 9 -
Starting difficult or loss of power.	1. Dirty air filter. 2. Impurities in fuel tank. 3. Water in fuel tank and in fuel. 4. Fuel tank cap vent and /or carburettor clogged. 5. Engine is hot; choke is closed. Open choke.	10 -
Uneven running.	1. Faulty spark plug or incorrect gap. 2. Dirty air filter.	9 10
Engine overheats.	1. Spark plug gap incorrect. 2. Dirty air filter. 3. Engine cooling fins clogged. 4. Oil level too low. 5. Starter pulley fouled by grass cuttings, etc.	9 10 -
Brush cutter vibrates excessively.	1. Blade incorrectly balanced or cutting attachment incorrectly fitted. 2. Engine bolts loose.	3 -

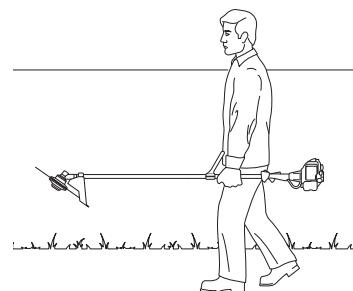

TRANSPORT AND STORAGE

TRANSPORT

WARNING :

When transporting or carrying your brush cutter, the engine must always be stopped and the transport guard must be installed on the cutting attachment.

When carrying your brush cutter, hold it by the transmission tube in a balanced position. If it is to be transported in a vehicle, make sure that it is properly secured so it cannot move. It must be positioned so that there is no risk of fuel leakage.

STORAGE

If the machine is not to be used for more than two months, the following storage precautions should be taken:

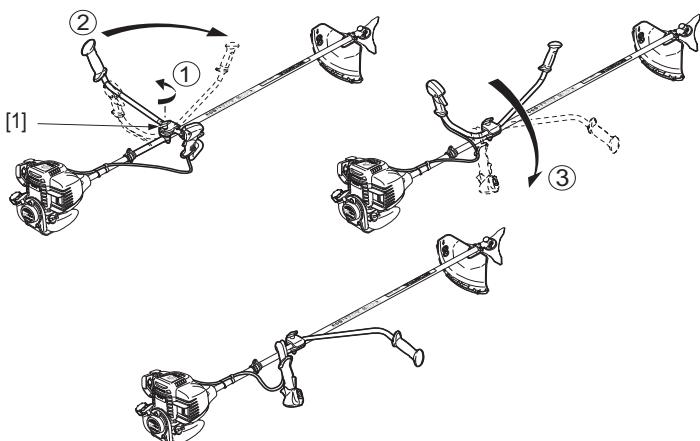

- Drain the fuel tank and run the engine to empty the carburettor.
- Remove the spark plug and pour a few drops of oil (same quality as that used in the engine) into the cylinder.
- Gently pull the recoil starter to distribute the oil in the cylinder and on the piston. Then reinstall the spark plug.
- Clean the whole machine, paying special attention to plant residues accumulated around the cutting attachment, in the engine cooling fins and under the cowlings.
- Using a paint brush, apply a thin film of standard oil over the metal cutting attachments to prevent corrosion.
- Store the machine in its packaging, in a cool dry place.
- If the machine is to be stored in a vertical position, place it with the engine at the bottom so that it will not topple over.

FOLDING THE HANDLE (TYPE UEET ONLY)

For easier storage, the handle on your brushcutter can be swivelled round. Proceed as described below.

CAUTION:

- Turn the handle clockwise only.
- Never swivel the handle through more than a quarter of a turn.
- Do not unscrew the knob [1] by more than 6 turns.

USING THE AFTER A STORAGE PERIOD

1. Remove the spark plug, check that it is clean and that the electrode gap is correct. Pull the starter several times.
2. We recommend that the spark plug be screwed down as far as possible by hand until finger tight ; then use a plug spanner to tighten it by an extra 1/8 or 1/4 turn.
3. Check the level and condition of the engine oil.
4. Fill the fuel tank and start the engine.

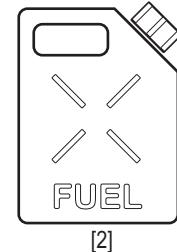

NOTE: If the cylinder has been coated with oil, the engine will smoke on start-up. This is normal.

FUEL STORAGE

NOTE:

- Ensure that you use containers or drums specifically designed for hydrocarbons [2]. This will prevent polluting the fuel through the dissolution of the container walls, which will lead to poor functioning of the engine.
- The warranty does not cover a blocked carburetor or valves jammed by old or polluted fuel.
- The quality of unleaded petrol alters very quickly (2 to 3 weeks in some cases). Do not use fuel more than 1 month old. Store the absolute minimum required for your monthly consumption.

ACCESSORIES

CURRENT PARTS, CONSUMABLES

Various accessories are supplied with the machine or are available as options, depending on the model.

WARNING :

For your safety, it is strictly prohibited to install any other attachment than the ones listed above and especially designed for your brushcutter's model and type.

TECHNICAL SPECIFICATIONS

MODELS	UMK425E1				
	UEET	LEET			
General characteristics					
Description code	HAJF		HAHF		
Dimensions L x W x h	mm	1 859 x 671 x 517 (1 888 x 671 x 504)*			
Empty weight (without cutting attachment)	kg	6.28			
Engine					
Model	GX25T				
Description code	GCALT				
Type	4 stroke, overhead-camshaft, single cylinder				
Displacement	cc	25			
Bore / Stroke	mm	35 x 26			
Net power** (ISO 8893)	kW/rpm	0.72 / 7 000			
Net Torque max.of engine** (SAE J1349)	N.m	1.0 / 5 000			
Maximum speed	rpm	10 000			
Idle speed	rpm	3 100			
Engine oil	SAE 10W30				
Oil tank capacity	ℓ (cc)	0.08 (80)			
Fuel	Unleaded				
Fuel tank capacity	ℓ (cc)	0.58 (580)			
Ignition	Transistorized magneto ignition				
Spark plug brand and type	NGK CM5H				
Carburettor	Membrane				
Transmission	Helical-toothed bevel gear				
Gear ratio	14 / 19				
Cutting attachment rotation speed	rpm	7 000 / (9 200*)			
Length of nylon line Ø 2,7 (standard)	m	3			
Consumption	g/kWh	340			

* Values in brackets: machine fitted with 3-tooth disc, 4-tooth disc and saw blade.

** The power rating of the engine indicated in this document is the net power output tested on a production engine for the engine model GX25T and measured in accordance with ISO8893 at 7 000 rpm (Net Power) SAE J1349 and 5 000 rpm (Net Torque max.). Mass production engines may vary from this value. Actual power output for the engine installed in the final machine will vary depending on numerous factors, including the operating speed of the engine in application, environmental conditions, maintenance, and other variables.

Déclaration CE de conformité

- 1) Le soussigné, Mr Takayoshi Fukai, représentant du constructeur, déclare par la présente que la machine décrite ci-dessous est conforme aux dispositions de la Directive Machine. Cette machine répond également aux dispositions de :
- Directive relative aux émissions sonores dans l'environnement des matériels destinés à être utilisés à l'extérieur des bâtiments ;
 - Directive relative à la compatibilité électromagnétique des équipements électriques et électroniques ;
- 2) Description de la machine :
- | | | | |

EC-Declaration of Conformity

- 1) The undersigned, Mr Takayoshi Fukai, representing the manufacturer, herewith declares that the machinery described below complies with all the relevant provisions of the Machinery Directive **98/37/EC**. The machinery also complies with the provisions of the:
- outdoor noise Directive : **2000/14/EC - 2005/88/EC**
 - EMC Directive : **2004/108/EC**
- 2) Description of the machinery:
- | | |
|---|--------------|
| a) Make : Honda | Brush cutter |
| b) Category: | |
| c) Type : UMK425E1 (LEET - UEET), UMK435E1 (LEET - UEET) | |
| d) Serial number: | |
- | | |
|---------------------------|--------------------------|
| UMK425E1 UEET HAJF | 1005481 ~ 1015000 |
| UMK425E1 LEET HAHF | 1006124 ~ 1011000 |
| UMK435E1 UEET HALF | 1010641 ~ 1022000 |
| UMK435E1 LEET HAKF | 1004208 ~ 1022000 |
- 3) Outdoor noise Directive
- | |
|---|
| a) measured sound power: 108 dB(A) (UMK425E1 - UMK435E1) |
| b) guaranteed sound power: 109 dB(A) (UMK425E1 - UMK435E1) |
| c) noise parameter: |
- engine net power: **0.72 kW/7 000 min-1 (UMK435E1)**
- 1.00 kW/7 000 min-1 (UMK435E1)**
- d) Conformity assessment procedure: **Annex V**
- e) notified body : **N/A**

Πιστοποιητικό συμμόρφωσης Ε.Ε.

- 1) Ο υπογράφων, Takayoshi Fukai εκπροσωπώντας τον κατασκευαστή, δια του παρόντος δηλώνω ότι το μηχάνημα που αναφέρεται πιο κάτω βρίσκεται σε εναρμόνιση με τις προβλέψεις των οδηγιών της ΕΕ. Τα μηχανήματα βρίσκονται σε εναρμόνιση με τις προβλέψεις των:
- Οδηγίων θορύβου εξωτερικού χώρου;
 - Οδηγίας EMC;

Dichiarazione di conformità

- 1) Il sottoscritto, Takayoshi Fukai in rappresentanza del costruttore, dichiara qui di seguito che la macchina sotto descritta è conforme con tutte le condizioni pertinenti della Direttiva Macchine. La macchina è anche conforme alle condizioni della:
 - Direttiva sulle emissioni acustiche delle macchine destinate a funzionare all'aria aperta;
 - Direttiva sulla compatibilità elettromagnetica;
- 2) **Descrizione della macchina:**
 - a) Marca: b) Categoria: Decesugliatore c) Tipo: d) Numero di serie:
- 3) **Direttiva emissioni acustiche:**
 - a) livello di potenza sonora misurata - b) livello di potenza sonora garantita
 - c) parametri rumorosità : potenza netta installata - d) procedura di valutazione Conformità
 - e) organismo notificato
- 4) Costruttore:
- 5) Rappresentante Autorizzato idoneo a compilare la documentazione tecnica:
- 6) Riferimento agli standard armonizzati:
- 7) Altri standard o specifiche nazionali
